The application is an extremely easy-to-use audio editor that lets you create and edit loops in a couple of clicks. No need to go through the application's settings; it supports all common audio formats. Just select your file, and you are ready to go. You can load the supported formats by hitting the Import button in the application's toolbar. The application features a wide range of editing options that can be used to enhance looped audio files. Use the application's automatic detection tool to locate start and end points for each loop section, set them manually, or even remove unwanted parts. You can also cut off all other parts of your audio file that don't seem to integrate into your loop. Additional features include importing and exporting WAV, AIF, SF2, ZEX, and RAW formats, making a smart use of the application's features. Main features: Highly intuitive interface Support for a wide range of audio formats Auto detection tool for loop detection Precise loop start and end points Edit options and effects Requirements: OS: Windows 7, 8, 10 Category: Audio Developer: Price: Free

The present invention relates to an apparatus for detecting the presence and the position of a magnetic field and, more particularly, to such an apparatus for detecting a magnetic field generated by a current flowing in an elongated conductor. There are several reasons for wanting to detect the presence and position of a magnetic field. For example, a magnetic field is generated by a current flowing through a conductor and it is desirable to locate the conductor in order to determine the direction and the magnitude of the current. Magnetic field detection and location is also useful for determining the position of an object within an electromagnetic field. In the latter case, the current through the conductor which generates the magnetic field is usually in phase with the voltage across the conductor. However, it is often desirable to determine the phase of the current with respect to the voltage, and, also, it is desirable to know whether the magnetic field is at the right or left side of the conductor, since the direction of the current may be important, for example, in determining the direction of a rotating motor. The conductor, which generates the magnetic field, is usually a wire or, if a solenoid or coil is used, it is usually stationary. The current and the magnetic field are in phase and the velocity of the magnetic field depends on the frequency of the

What's New in the Zero-X Seamless Looper?

Zero-X Seamless Looper is an excellent utility that helps you create loops in your favorite music and even create them from scratch. This is extremely useful for those who want to cut sound files into loops. It's also very easy to use as there is no other similar software that offers the same features. This comes with some limitations that we'll address later in the review. The first thing that you will notice when you download and install this application is that it comes with many sample loops of sound tracks that are ready to use. You can choose a loop you like, add it to your project and let Zero-X Seamless Looper take care of the rest for you. The next thing you will notice is that the loops come with options that will help you adjust the tempo, the beat position and length and even the key that's detected in the music. The application comes with a visual editor so you can make any adjustments to the loops on the spot. When you are ready to use the loops you have imported, you simply need to select the option that you want to apply the loop to and press the Start button. The loop is then displayed along with other tools that will help you edit and enhance the loops. The software also comes with a lot of loop editing features that include the ability to cut a section of the loop, add fade effects, silence the section and even change the pitch of the sound. When you are done with the editing process, you can export the loop to MP3, OGG or WAV format. Zero-X Seamless Looper is very easy to use and even novice users will be able to create loops with minimal effort. As a special thing we are giving away the utility along with 10 MP3 loops. The loops are recorded by a professional sound engineer, and they are in the list as follows: 1. Bhopali - Fading 2. Hudeep - Voyage 3. Darkatapa - Trapped (this one is silent) 4. Sinilek - Snake (this one is silent) 5. Sohail - Bitti (this one is silent) 6. Shereena - Ghost (this one is silent) 7. Zoyo - Campfire (this one is silent) 8. Vikas Shah - House (this one is silent) 9. Hayal Syed - Keep On 10. Neil Bhogal - Journey (this one is silent) This giveaway is open to all people and we just invite you to join us and to spread the word. We'll randomly select the winners and the winners will have a week to respond. In case the winners don't respond, we'll choose a new winner. The giveaway is only open
